## Lecture Notes J: Chemical Equilibrium II

## Problem

Consider the following reaction:

$$
\mathrm{A}+2 \mathrm{~B} \leftrightarrow 2 \mathrm{C} \quad \mathrm{~K}=1.6 \times 10^{-4}
$$

50.0 ml of a 0.150 M solution of A is mixed with 25.0 ml of a 0.250 M solution of B . At equilibrium, what is the concentration of each of the species ( $[\mathrm{A}],[\mathrm{B}],[\mathrm{C}]$ ) in the solution?

## Concept

Consider the following reaction
$2 \mathrm{NOCl}(\mathrm{g}) \leftrightarrow 2 \mathrm{NO}(\mathrm{g})+\mathrm{Cl}_{2}(\mathrm{~g})$
with initial conditions: $[\mathrm{NOCl}]_{0}=1.0 \mathrm{M} ;[\mathrm{NO}]_{0}=0.5 \mathrm{M} ;[\mathrm{Cl} 2]_{0}=0.0$
Which is the correct expression for the equilibrium concentrations?
A. $[\mathrm{NOCl}]=1.0-2 \mathrm{x}$
$[\mathrm{NO}]=0.5+2 \mathrm{x}$
$\left[\mathrm{Cl}_{2}\right]=+2 \mathrm{x}$
B. $[\mathrm{NOCl}]=2.0-2 \mathrm{x}$
$[\mathrm{NO}]=0.5+2 \mathrm{x}$
$\left[\mathrm{Cl}_{2}\right]=+\mathrm{x}$
C. $[\mathrm{NOCl}]=1.0-2 \mathrm{x}$
$[\mathrm{NO}]=0.5+2 \mathrm{x}$
$\left[\mathrm{Cl}_{2}\right]=+\mathrm{x}$
D. $[\mathrm{NOCl}]=1.0+\mathrm{x}$
$[\mathrm{NO}]=0.5+\mathrm{x}$
$\left[\mathrm{Cl}_{2}\right]=-\mathrm{x}$

## Problem

Consider the following reaction:

$$
\mathrm{A}+2 \mathrm{~B} \leftrightarrow 2 \mathrm{C} \quad \mathrm{~K}=1.6 \times 10^{4}
$$

50.0 ml of a 0.150 M solution of A is mixed with 25.0 ml of a 0.250 M solution of B . At equilibrium, what is the concentration of each of the species ([A], [B], [C]) in the solution?
